

REPLACING THE GLASS IN 6.1 LCD OCS

STEP 1

REMOVE 12 SCREWS FROM COVER

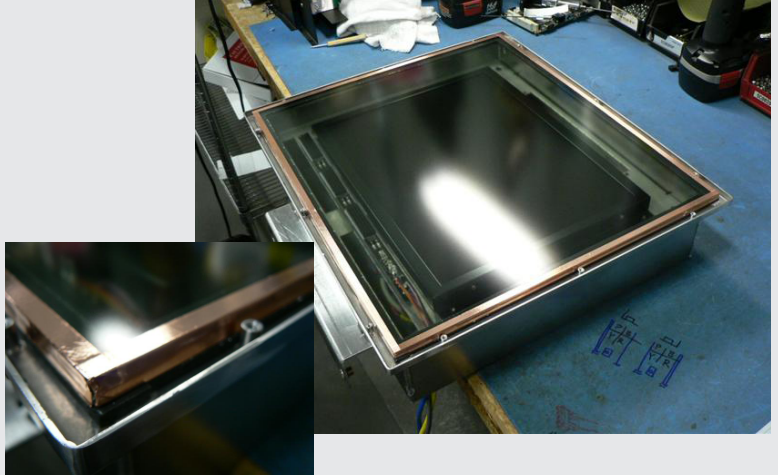

Carefully remove the 12 screws from the cover of the LCD enclosure, taking care to not allow the cover and glass to fall once the screws are removed.

REMOVE EXISTING GLASS

Take note of the positioning and placement of the existing glass and carefully remove it from the enclosure.

REMOVE FILM AND PLACE GLASS

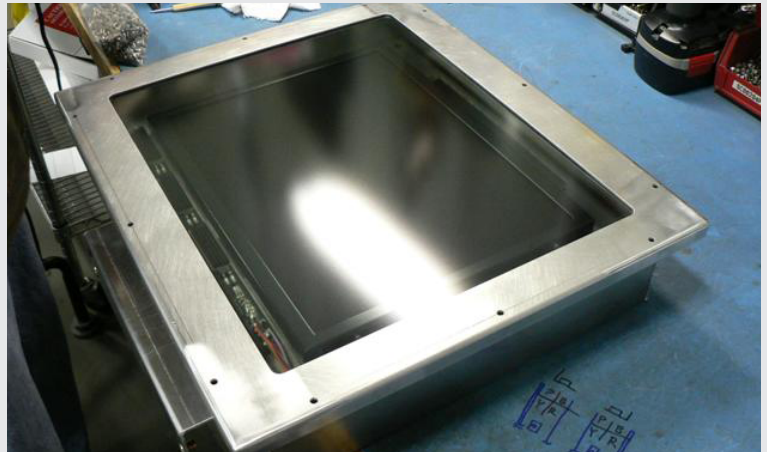

Cartefully remove the glass from the protective packaging. Remove protective film from LCD screen. Place the glass with the **gasket side down** in the enclosure.

STEP 2

REPLACE FRONT COVER PLATE

Set the front cover on to the cover. The holes on the cover will line up with the standoffs on the lower enclosure.

STEP 3

SECURE COVER WITH SCREWS

Secure cover with 12 screws. To ensure even pressure, follow the diagram on the right by starting in the top center and continuing clockwise every 5 screws.

Torque setting on the drill should be on 4.
